

ABOUT THIS PRODUCT

It's an innovative serum for wrinkle reduction. Glam's® objective is to achieve optimal results by using only high potent ingredients of the purest quality; unnecessary substances that can cause irritations or sensitize the skin and fillers are dispensed to meet the call for top quality anti-wrinkle cosmeceutical product. Glam's® the unique serum with only 3 ingredients in the most effective concentration for targeted wrinkle treatment.

BENEFITS:

- Reduce fine lines and wrinkles depth via muscle relaxation
- Prevent new wrinkles formation
- Instant filling & plumping effect
- Immediate visible results in 5 days
- Increase glow & radiance for revitalized skin

Before

After

- Aged between 35-45 years, applied twice a day a cream containing 2% Argireline™, focusing on crow's feet area for 7 days.
- Reduction of wrinkles volume by 20.6%
- Reduction of wrinkles length by 15.9%

DIRECTION FOR USE:

Apply onto targeted wrinkles area, suitable for every parts of skin

KEY INGREDIENTS

ACTION

56% Hyaluronic Acid

- Instant filling & plumping effect
- Redensity & moisturize skin complexion
- Reduce fine lines & wrinkles
- Increase skin moisture & elasticity
- Long lasting hydration

33% Seaweed

- Reverse the damaging effect
- Restructure & increase skin elasticity
- Increase glow & radiance for revitalized skin
- Protect from free radicals & UV radiation
- Stimulate collagen production

10% Argireline™

- Reduce the degree of formed wrinkle & prevent the new wrinkle formation
- Increase cell proliferation by as much as 43% in 5 days
- Reduce wrinkles through muscle relaxation
- Reduce skin roughness in 28 days
- Visible result in 1 week

INGREDIENT : AQUA, HYALURONIC ACID, RED ALGAE, ARGIRELINE, ETHYLHEXYLGLYCERIN, PHENOXYETHANOL

Ingredient Highlight:

1. Argireline® - Acetyl Hexapeptide-8

A unique, effective anti wrinkle peptide that was proven as first alternative to Botulinum Toxin.

Formation of expression wrinkles:

Wrinkles are caused by muscle contractions. Muscles get the signal to contract from the brain through nerves. But because the nerves do not reach right up to the muscles, since there is a small gap in between (synaptic gap), the signal cannot be transmitted to the muscles. In order for the signal to reach the muscles, the messenger substance Acetyl choline (ACh) is released as an aid (for bridging) and the muscles are contracted. The more neurotransmitters are released (acetyl choline), the stronger the muscle contracts and deep wrinkles are formed. Argireline intervenes in a natural way in this system and reduces the release of acetyl choline. The muscles relax and this in turn causes the wrinkles to gradually smooth and the formation of new wrinkles is prevented.

Argireline® is a natural peptide, whose muscle-relaxing effect and wrinkle reducing property has been confirmed in clinical trials. Clinical studies were performed with a maximum concentration of 10% Argireline®. GLAM'S® contain the highest recommended concentration of 10%. The recommended dosis by the manufacturer are 2-10%

2. Hyaluronic acid

Hyaluronic acid belongs chemically to polysaccharides, multiple sugars. It is a natural substance that is produced by the skin itself. This is also the reason why hyaluronic acid is well tolerated and quickly absorbed by the skin. Hyaluronic acid is present in young skin in large quantities. With age, the natural content in the body is reduced or destroyed. This can occur by the natural aging process or by constant environmental influences to which the skin is exposed. The skin loses its elasticity and deep wrinkles develop. The role of hyaluronic acid is to support collagen fibers and structural proteins and bind moisture. Because of its ability to store large amounts of water, by its nature hyaluronic acid absorbing more than 1000 times its weight, gives the skin volume and a youthful appearance. This in turn causes a padded effect. The wrinkles are filled from within - a lifting effect is caused, the skin becomes elastic and looks plump. Since many years hyaluronic acid, will be applied with success in wrinkle treatments by injection and are an indispensable ingredient in today's cosmetic researches. GLAM'S® contain a high concentration of hyaluronic acid.

3. Red algae (Chondrus Crispus)

Red algae have an ever higher status in cosmetics because of their high level of minerals, trace elements, vitamins (especially rich in B vitamins A, C and E) and proteins. These feed the skin with all the necessary nutrients and promote the natural regeneration process of the skin. This in turn is important for firm skin, a radiant complexion and the smoothing of wrinkles. Due to a lack of nutrients, the cells also suffer from lack of energy which among other things can be visible on the skin. Red algae protect the skin from the damaging effects of free radicals and give it a natural UV protection. Due to the high proportion of amino acids the formation of collagen is stimulated, the skin regains its elasticity and firmness. It is an important ingredient against premature wrinkles and age spots, and on top of that it is very friendly to the skin because it has no allergy-causing substances. Chondrus Crispus extracts are essential for high-quality facial care.
